436/181, 436/71

ABSTRACT:

Low density lipoproteins are directly determined in fluid samples by selectively precipitating low density lipoproteins from the sample by forming clusters, selectively consuming the high density and very low density lipoproteins, and resolubilizing the low density lipoproteins for direct determination thereof. The clusters are formed by treating the fluid sample with a mixture of a polyanionic compound, a divalent metal, and a nucleating agent. The clusters are redissolved and assayed for low density lipoproteins.

US-CL-CURRENT: 436/178; 435/11, 436/177, 436/71

ABSTRACT:

Disclosed is an improved process for the recovery of cholesterol rich fractions from mammalian serum or plasma. The process involves adsorbing the fraction on precipitated silica gel agglomerates which are then separated from the serum or plasma whereupon the adsorbed cholesterol rich fraction is eluted from the silica and recovered.

TITLE: Method for detecting lipoprotein (a) and associated cholesterol

DATE-ISSUED: June 14, 1994

INVENTOR-INFORMATION:

NAME	CITY	STATE	ZIP CODE	COUNTRY
Seman; Leo J.	Methuen	MA	03079	

US-CL-CURRENT: 436/71; 435/11, 435/19, 435/28, 435/7.1, 436/518, 436/535

ABSTRACT:

A method for assaying lipoprotein (a) in a liquid sample containing other lipoproteins, and a assay device for use in the method are disclosed. In the method, the liquid is contacted with a solid-support reagent containing lectin attached to a solid support, under conditions effective to bind of lipoprotein (a) to the support-bound lectin. After removing unbound lipoproteins, the amount of lipoprotein (a) bound to the support is assayed. In one embodiment, the method and assay device are designed for assaying cholesterol associated with lipoprotein (a).

TITLE: Method for measuring serum cholesterol

DATE-ISSUED: December 28, 1982

INVENTOR-INFORMATION:

NAME	CITY	STATE	ZIP CODE	COUNTRY
Pascal; Marc	Dijon			FR

US-CL-CURRENT: 435/11; 210/905, 252/408.1, 435/20, 435/25, 435/810, 530/359, 530/396

ABSTRACT:

The invention relates to methods for measuring cholesterol of various fractions of seric lipoproteins, the methods comprising the separation of said fractions of lipoproteins by means of a lectin capable of precipitating the LDL and VLDL fractions, then measuring the amount of cholesterol in the precipitate and in the remaining solution.
